

Stock exchange announcement: A-TEC Industries in consortium wins major order for hard-coal-fired power station in Germany

Vienna, 20 September 2007 – A-TEC Industries AG (ISIN AT00000ATEC9) announces that its wholly owned subsidiary Austrian Energy & Environment (AE&E), has been awarded a major contract for the hard-coal-fired power station in Lünen, Germany. AE&E's share of the total value of the project is about EUR 280m.

The consortium – consisting of Siemens Power Generation, AE&E Group and Japanese power station constructor IHI – has received an order for the construction of an 800 MW turnkey power station from Trianel Power-Projektgesellschaft Kohlekraftwerk mbH & Co. KG (TPK). The facility is scheduled for completion and handover in 2012.

AE&E's contribution covers engineering services, supplying the components for the entire flue gas desulphurisation system and major steam generation components, fitting all the systems for the boiler island and bringing the latter online. The order marks AE&E's entry into the large-scale coal-fired power station market.

An EPC agreement (engineering, procurement and commissioning) between the three consortium partners bringing together their joint expertise in environmental technology and guaranteeing optimal interaction was instrumental in winning the order for the consortium.

AE&E Group and leading Japanese power station constructor IHI agreed on strategic cooperation in November 2006. The international energy specialists' partnership focuses on the fast-growing German coal-fired power station market.
