AE&E Group lands major contract worth EUR 400 million

Subsidiary Von Roll Inova to build Energy-from-Waste plant in the UK

Vienna, August 29, 2008 – The Austrian Energy & Environment Group (AE&E), the plant construction division of the internationally active A-TEC Industries AG conglomerate, was commissioned by Riverside Resource Recovery Ltd. to build an Energy-from-Waste plant in the UK. The contract is worth approximately EUR 400 million. When the plant goes online in 2011, the facility will process 585,000 Mg of municipal and commercial waste per year in average and generate 72 MW of electrical energy.

Riverside Resource Recovery Ltd (RRRL) – a subsidiary of Cory Environmental which is one of the UK's largest recycling, waste management, and energy recovery enterprises – selected AE&E's Swiss subsidiary Von Roll Inova as the general contractor in charge of building an Energy-from-Waste plant at a site southeast of London. The Costain Group, a leading construction firm in the UK, was entrusted with the civil engineering work.

Von Roll Inova is responsible for building the complete plant, including engineering and execution of all technical systems from combustion and steam generation to flue gas treatment and energy recovery. Apart from building and commissioning the plant, Von Roll Inova's scope of delivery also includes technical management of the operation for the first four years. The construction work and the installation of building technology components will be handled by Costain under a subcontracting agreement with Von Roll Inova.

The highly efficient plant concept is based on Von Roll Inova's proven combustion technology. Each of the facility's three trains can process 31.8 Mg of waste per hour. A 72 MW turbine will generate enough electricity to serve roughly 66,000 households. It is powered by steam at 425°C and a pressure of 70 bar. Additional heat recovery is used to boost the plant's overall energy efficiency. The majority of the waste will be delivered to the plant in an environmentally friendly manner: in closed containers on barges via the River Thames.

Following the successful commissioning of the Issy-les-Moulineaux plant in Paris, the Riverside facility will be the next major Von Roll Inova reference plant situated in a European

Von Roll Inova Holding AG

With around 1,300 employees and about 400 completed facilities to its name, Von Roll Inova is a world leader in energy-from-waste technology. It offers custom modular and one-step services ranging from planning, engineering, construction and operation through to maintenance and auditing of complete plants. Headquartered in Zurich, Von Roll Inova has branches in France, Japan, Sweden, Switzerland, China and the USA.

Austrian Energy & Environment

Austrian Energy & Environment AG is headquartered in Vienna, Austria, and is one of the leading international suppliers of systems for thermal power generation and environmental technologies. The Group's product portfolio includes boilers and boiler plants, flue gas cleaning systems, energy from waste plants, combined cycle plants, boiler pressure parts, coal gasification components, valves and services ranging from engineering and modernisation to modification and plant operation. The group employs some 4,700 people in Vienna and Graz (Austria), Zurich (Switzerland), Cologne, Ratingen and Nuremberg (Germany), Brno (Czech Republic), Paris (France), Bilbao and Madrid (Spain), Slavonski Brod (Croatia), Moscow (Russia), Norcross (USA), Shanghai and Nanjing (China), Chennai (India), Sao Paulo (Brazil) and Sydney (Australia). It is owned by A-TEC Industries AG.
